### Side Effects that Need Urgent Attention

Although they are uncommon, it is important to know the symptoms of the most serious side effects. Call your doctor immediately if you experience any of the following:

- Severe depression
- Thoughts of harming yourself or others
- Chest pain
- Persistent fever or fever that continues to increase
- Loss of vision or blurry vision
- Difficulty breathing (shortness of breath with exertion is common with therapy)
- Worsening of psoriasis
- Bloody diarrhea
- Unusual bleeding or bruising
- Severe abdominal or lower back pain
- You or your female partner becomes pregnant
- Any symptom that might be potentially life threatening
- Any symptoms that causes excessive anxiety
